▶ITEM 245-A

DEFINITION OF OR SPECIFICATIONS FOR CRATES

Crates are containers constructed of wood or metal slats or structural members with apertures between, securely nailed, bolted, screwed, riveted, welded, glued, dovetailed, or wired and stapled together, having sufficient strength to hold contents so as to withstand the normal rigors of the less-than-truckload environment. Crates must be constructed with slats or members sufficiently close to one another to adequately protect contents on the sides, ends, tops and bottoms, and in such manner that the crate containing its contents may be taken into or out of the vehicle. Contents must be securely held within crates and no part shall protrude, unless otherwise provided in individual items. Surfaces liable to be damaged must be fully covered and protected. All moveable contents within the crate must be blocked and/or braced to prevent any shifting during transportation. Commodities with legs must be suspended away from all edges of the crate by at least one inch. If the weight of the commodity exceeds 500 pounds, a standard crate must be used instead of a wirebound crate.

Wooden crates, other than wirebound crates, must be constructed as follows:

- (1) Lumber must be seasoned, reasonably sound, and free from cross grain and knots which would interfere with nailing or stapling, or knots which are greater than 1/3 the width of the lumber.
- (2) Crates must be constructed with outer framework consisting of upright and horizontal members and with additional diagonal upright and horizontal members where necessary to provide proper strength and rigidity.
- (3) Crates must be constructed with three-way locking corners, where members will be joined with nails or other fasteners driven into side grain of joining members. Examples are shown below:

- (4) All joining crate members must be fastened by double nailing or stapling.
- (5) Crates must be designed and constructed with transverse cross-members at base sufficient in strength to protect underside of article from damage by mechanical handling equipment.
- (6) Structural panels, including plywood, oriented strand board (OSB), and waferboard, must be manufactured with exterior glue.

Wirebound crates must be constructed as follows:

- (1) The framework must be reasonably sound and securely fastened together.
- (2) The face boards that form the container must be of sufficient strength, solid or slatted, to support the contents based on weight, size and distribution environment.

(Continued on following page)

RULES

ITEM 245-A-Continued

(3) Binding wires should be wrapped around all six sides of the container at frequent intervals in order to increase the strength and rigidity of the container. The wires should be securely attached to the crate by staples and securely fastened with one of the following closure methods:

- (a) Style 1—Wires are twisted together.
- (b) Style 2—Wires are turned back to form loops that are hooked into each other and bent back.
- (c) Style 2A—Wires are turned back to form loops that are hooked into each other and bent back, then twisted on itself.
- (d) Style 3—Wires are turned back to form loops that are hooked into each other and bent back with wires across the ends in place of battens.

ITEM 275-A

DEFINITION OF OR SPECIFICATIONS FOR TUBES

► **Tubes** are containers that may be cylindrical, squared or triangular and may be made of fiberboard, paperboard or plastic. Tubes must be of construction and size that protects the contents and prevents movement of the contents that could cause damage from the normal rigors of the less-than-truckload environment. Ends of tubes may be removable or nonremovable and may be made of same or other materials. Removable ends must be securely held in place to protect and prevent loss of contents during transport.

ITEM 540-A

HAZARDOUS MATERIALS

(see Notes A and C)

Sec. 1. Compliance with Department of Transportation (DOT) Descriptions and Packaging Requirements:

Sec. 1(a). Articles subject to the DOT's hazardous materials regulations must be described on bills of lading and shipping orders as shown in those regulations. Abbreviations must not be used, except as authorized in 49 CFR §172.202. When the DOT's hazardous materials regulations description differs from the Classification description, the Classification description must also be shown on bills of lading and shipping orders.

Sec. 1(b). The packaging of hazardous materials must comply with the Classification packaging requirements (unless otherwise noted) and are also governed by the rules and regulations as prescribed by the DOT's hazardous materials regulations. When individual items in the Classification authorize use of a container and further require specific container information markings or container manufacturer certificates, with the exception of fiberboard boxes as specified within Item 222, the DOT-adopted UN container markings will supersede Classification packaging requirements.

Sec. 2. Transportation of Explosives and Dangerous or Hazardous Articles or Materials: Unless otherwise provided, carriers may accept shipments of explosives, hazardous wastes, hazardous substances or radioactive articles or materials, including radioactive waste, for transportation in accordance with the transportation regulations of the U.S. Department of Transportation (DOT), Environmental Protection Agency (EPA) and the U.S. Nuclear Regulatory Commission (NRC), subject to the following provisions:

Sec. 2(a). Hazardous wastes or hazardous substances for disposal, subject to the provisions of Title 49 CFR Parts 171.3 and 172.205; or radioactive waste; will be subject to the following requirements:

(1) A notice of 48 hours must be given by the shipper to the carrier before tender of shipment, providing the necessary shipment information, including the name of shipper, origin, consignee and destination.

(2) The carrier will determine before acceptance of the shipment if consignee will accept the shipment when tendered for delivery. Only upon advice from consignee that the shipment will be accepted, may carrier accept shipment at the origin point. If consignee advises that shipment will not be accepted, the destination carrier will attempt to determine if and when it would be accepted at destination and advise shipper or connecting carrier where joint line service is involved.

Any charges assessed for service performed under paragraph (2) of Sec. 2(a) will be as provided in carrier tariffs.

(3) Shipments must be prepaid except when shipped by the U.S. Government on Government bills of lading.

(4) Shipments which are delayed in transit directly or indirectly due to restrictions imposed by the shipper or consignee or which, because of the nature of such shipments, are delayed in transit by regulations imposed by any state, federal or other governmental agency will be subject to delay-in-transit charges as provided in carriers' tariffs. Such charges begin at time shipment is delayed and continue until such time as transportation can be resumed or shipment delivered to consignee. Payment of charges assessed under this provision will be the responsibility of the party remitting the line-haul charges.

(5) When charges are assessed under circumstances described in paragraph (4) above, the carrier shall maintain a record of all shipment delays, including arrival and departure times at locations where delays occur, and the name of the party or regulatory agency authorizing or necessitating such delays.

(6) Except as provided in Note B or as authorized by the DOT in 49 CFR 173.28, hazardous waste is to be packaged in new or reconditioned DOT specification containers.

Sec. 2(b). Where required by federal, state or local regulations, carrier will prepare route plans which set forth the authorized or designated route to be utilized in transporting shipments of hazardous materials, wastes or substances, or radioactive articles or materials, including radioactive waste, from the initial origin to destination. The authorized or designated route should be the shortest available route over the highways approved by the appropriate federal, state or local agency for the transportation of hazardous materials including radioactive articles or materials. Where provided in applicable tariffs, carriers may assess separate charges for circuitous mileage when the authorized or designated route of movement exceeds the mileage over the carrier's normal or established route of movement from origin to destination.

Sec. 2(c). When carriers are required by federal, state or local regulations or statutes to pay fees to acquire permits to transport hazardous materials, wastes or substances, or radioactive articles or materials, the cost of acquiring such permits, including administrative or service charges where provided in carrier tariffs, will be paid by the party remitting the line-haul charges. Upon request, evidence of payment of the costs of acquiring permits shall be furnished.

Sec. 2(d). Unless exclusive use of carrier's equipment is ordered, carriers shall have full access to the equipment it uses in transporting hazardous shipments. Where exclusive use of equipment is ordered, such service will be charged for in accordance with applicable carrier tariffs.

8	—	Corrosive material	173.136
9	—	Miscellaneous hazardous material	173.140

Sec. 3(a). Except as provided in paragraph (c) of this section, a material not specifically listed in 49 CFR §172.101, Hazardous Materials Table, that meets the definition of more than one hazard class or division as defined in 49 CFR §173.21 through ►§173.140, shall be classed according to the highest applicable hazard class of the following hazard classes, which are listed in descending order of hazard:

- (1) Class 7 (radioactive materials, other than limited quantities).
- (2) Division 2.3 (poisonous gases).
- (3) Division 2.1 (flammable gases).
- (4) Division 2.2 (nonflammable gases).
- (5) Division 6.1 (poisonous liquids), Packing Group I, poisonous-by-inhalation only.
- (6) A material that meets the definition of a pyrophoric material (Division 4.2) in 49 CFR §173.124 (b)(1).
- (7) A material that meets the definition of a self-reactive material (Division 4.1) in 49 CFR §173.124 (a)(2).
- (8) The hazard class and packing group for a material meeting more than one of the following hazard classes shall be determined using the precedence table in paragraph (b) of this section:
 - Class 3 (flammable liquids)
 - Class 8 (corrosive materials)
 - Division 4.1 (flammable solids)
 - Division 4.2 (spontaneously combustible materials)
 - Division 4.3 (dangerous when wet materials)
 - Division 5.1 (oxidizers)
 - Division 6.1 (poisonous liquids or solids other than Packing Group I poisonous-by-inhalation).
- (9) Combustible liquids.
- (10) Class 9 (miscellaneous hazardous materials).

¹See 49 CFR §173.127.

²Materials of Division 4.1 other than self-reactive substances and solid desensitized explosives, and materials of Class 3 other than liquid desensitized explosives.

³Denotes an impossible combination.

⁴For pesticides only, where a material has the hazards of Class 3, Packing Group III, and Division 6.1, Packing Group III, the primary hazard is Division 6.1, Packing Group III.

Sec. 3(c). The following materials are not subject to the provisions of paragraph (a) of this section because of their unique properties:

(1) A Class 1 (explosive) material that meets any other hazard class or division as defined in this part shall be assigned a division in Class 1. Class 1 materials shall be classed and approved in accordance with 49 CFR §173.56;

(2) A Division 5.2 (organic peroxide) material that meets the definition of any other hazard class or division as defined in this part, shall be classed as Division 5.2;

(3) A Division 6.2 (infectious substance) material that also meets the definition of another hazard class or division, other than Class 7, or that also is a limited quantity Class 7 material, shall be classed as Division 6.2;

(4) A material that meets the definition of a wetted explosive in 49 CFR §173.124(a)(1) (Division 4.1). Wetted explosives are either specifically listed in the 49 CFR §172.101 Hazardous Materials Table or are approved by the DOT Associate Administrator (see 49 CFR §173.124(a)(1)); and

(5) A limited quantity of a Class 7 (radioactive) material that meets the definition for more than one hazard class or division shall be classed in accordance with 49 CFR §173.423.

Sec. 4. Empty Shipping Packages Containing Hazardous Material Residue: Empty shipping packages containing the residue of hazardous material regulated by the U.S. Department of Transportation will be classified as the package itself only when: 1) the material name, identification number, hazard warning label(s) or placard(s), and any other markings indicating that the material is hazardous have been removed, obliterated or securely covered; and 2) they are excepted from the hazardous materials regulations, per 49 CFR §173.29. Otherwise, the package will be classified as the hazardous material contained therein.

While compliance with U.S. Department of Transportation hazardous materials regulations must be made, determination of the applicable class is subject to Item 680, Sec. 1(a), Note 2(a) and (b).

Sec. 5. Reverse Logistics: Shipments of hazardous materials may be offered for transportation from a retail store for return to its manufacturer, supplier or distribution facility for the purpose of capturing value, recall, replacement, recycling, or similar reason, provided they meet the definition specified in 49 CFR §171.8, the requirements set forth in 49 CFR §173.157, and bear the marking "REVERSE LOGISTICS—HIGHWAY TRANSPORT ONLY—UNDER 49 CFR 173.157."

Note A—These provisions do not obligate carriers to transport shipments beyond the scope of their operating authority or in violation of any applicable law, regulation, ordinance, or other legal restriction.

(Continued on following page)

RULES

ITEM 540-A-Continued

Note B—Articles or equipment containing or contaminated with polychlorinated biphenyl (PCB) destined to temporary storage sites or authorized disposal facilities must comply with all DOT and Environmental Protection Agency (EPA) regulations; and the articles or equipment must be prepared by shipper in accordance with the applicable Classification provisions.

Note C—These provisions do not apply on interstate shipments of hazardous wastes of no economic value destined for disposal, other than nuclear or radioactive wastes.

Note D—The most stringent packing group assigned to a hazard of the material takes precedence over other packing groups; for example, a material meeting Class 3 PG II and Division 6.1 PG I (oral toxicity) is classified as Class 3 PG I.

Note E—A material that meets the definition of Class 8 and has an inhalation toxicity by dusts and mists which meets criteria for Packing Group I specified in 49 CFR §173.133(a)(1) must be classed as Division 6.1 if the oral or dermal toxicity meets criteria for Packing Group I or II. If the oral or dermal toxicity meets criteria for Packing Group III or less, the material must be classed as Class 8.
