SUBJECT 18 — DOCKET 2023-1 — APPROVED AS MODIFIED

Item 245, Definition of or Specifications for Crates, and Item 680, Packing or Packaging—General, are amended as follows:

ITEM 245

DEFINITION OF OR SPECIFICATIONS FOR CRATES

Crates are six-sided containers constructed of wood or metal slats or structural members with apertures between, securely nailed, bolted, screwed, riveted or welded together, of sufficient design and strength to fully enclose and hold contents so as to withstand the normal rigors of the less-than-truckload environment. Crates must be constructed with slats or members sufficiently close to one another to adequately protect contents on the sides, ends, tops and bottoms, but openings on sides, ends and tops must not exceed 25 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening. Bottom must be constructed so as to adequately protect article(s) from underside damage caused by fork handling equipment or pallet jacks, and to prevent article(s) from falling through the slats or members. Contents must be securely held within crates and no part shall protrude, unless otherwise provided in individual items. Surfaces liable to be damaged must be fully covered and protected. All moveable contents within the crate must be blocked and/or braced to prevent any shifting during transportation. Commodities with legs must be suspended away from all edges of the crate by at least one inch. If the weight of the commodity exceeds 500 pounds, a standard crate must be used instead of a wirebound crate.

Wooden crates, other than wirebound crates, must be constructed as follows:

- (1) Lumber must be seasoned, reasonably sound, and free from cross grain and knots which would interfere with nails, bolts or screws, or knots which are greater than 1/3 the width of the lumber.
- (2) Crates must be constructed with outer framework consisting of upright and horizontal members and with additional diagonal upright and horizontal members where necessary to provide proper strength and rigidity.
- (3) Crates must be constructed with three-way locking corners, where members will be joined with nails, bolts or screws driven into side grain of joining members. Examples are shown below:

- (4) All joining crate members must be fastened by double nailing, bolting or screwing.

SUBJECT 18 — DOCKET 2023-1 — APPROVED AS MODIFIED — Concluded

(5) Crates must be designed and constructed with transverse cross-members at base sufficient in strength to protect underside of article from damage by mechanical handling equipment.

(6) Structural panels, including plywood, oriented strand board (OSB), and waferboard, must be manufactured with exterior glue.

[REMAINDER OF ITEM—NO CHANGE.]

ITEM 680

Secs. 1-4. No Change.

Definitions of the Terms 'In Packages' and 'Loose'

Sec. 5. (a) When the term 'in packages' is provided in connection with the separate descriptions of articles, such articles will be accepted for transportation in any container or in any other form tendered to carrier which will permit handling into or out of vehicles as units, provided such containers or tendered forms will render the transportation of freight reasonably safe and practicable so that it will withstand the normal rigors of the less-than-truckload environment. The term 'in packages' includes articles securely fastened to lift truck skids, pallets or platforms, unitized quantities, or articles in crate-like framework not complying with Item 245, but does not include articles 'in bulk,' 'loose,' 'on skids' or articles racked or braced in vehicles.

Secs. 5. (b)-17. No Change.

Comment: The requirements in Item 245 are clarified by: stating that crates are six-sided; amending the methods of securement; and specifying the bottom construction requirements. As modified, the requirements are amended to state that openings on sides, ends and tops must not exceed 25 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening. Item 680, Sec. 5(a) is concurrently amended to state that "in packages" also applies on articles tendered in a "crate-like framework not complying with Item 245."
